Video Annotation Editor

The PRO-XBoB **Video Text Overlay Software** is designed to provide a simple to operate text on video capability on either PAL/SECAN or NTSC composite video.

Controlled by a PC running PRO-XBoB application and connected by one RS232 COM port it is possible to display date and time, create and save up to 4 pages of text which can be recalled as needed.

On primary window you can have real time date and time and annotations during diving operations.

The others 3 screens can be programmed as you want, like as example, your pre-dive checklist.

Order your software now.

XBOB-4 lets your PC display text and vector graphics on standard TV monitors. With large user-definable character sets, XBOB-4 also supports bitmap graphics and multiple languages. XBOB-4 generates black background video on-board, or automatically genlocks to your video source and superimposes characters over the image.

Printable characters and commands drive XBOB-4 through an RS-232 data link, much like a serial terminal or printer. NTSC and PAL video standards are supported in a single hardware version. XBOB-4 is available as a PCB assembly only or fully enclosed in a rugged aluminum cabinet.
